

# Green Erase

EVERY BYTE MATTERS

## Secure Asset Disposal

Every device your organisation retires still holds fragments of your business — customer records, financial data, intellectual property, and the digital fingerprints of your operations. In the wrong hands, that information becomes a liability. At Green Erase, we eliminate that risk with precision-engineered data erasure and destruction services designed for corporate environments where privacy, compliance, and trust are non-negotiable.

**Protecting your information.  
Preserving your reputation.  
Reducing your environmental footprint.**

We combine industry-leading sanitisation standards with environmentally responsible IT asset handling, ensuring your data is permanently removed while your equipment is processed with care for the planet. From secure chain-of-custody collection to auditable certificates of destruction, Green Erase delivers complete confidence at end-of-life — because every byte matters, and so does every decision you make to protect it.

## Your Data Lives Longer Than Your Devices

Every retired device still holds sensitive information — customer records, financial data, intellectual property. Without proper sanitisation, that data becomes a breach waiting to happen.

- Recoverable data on retired devices
- Breach penalties and reputational damage
- Increasing regulatory pressure across industries.

Green Erase eliminates uncertainty with secure, standards-aligned processes that ensure your data is gone — permanently. We understand security and strict process is critical. We are R2v3, ISO9001, ISO14001, ISO 45001 and AS/NZS 5377 certified.

## COMPLETE, CERTIFIED DATA SANITISATION & DESTRUCTION

- Secure Data Erasure — NIST-aligned multi-pass sanitisation with full verification using proprietary Blancco erasure software.
- Physical Destruction — Disk shredding to federal government security standards
- Media-Specific Solutions — HDD, SSD, tapes, mobile devices.
- Chain-of-Custody Logistics — Secure collection, tamper-evident handling.

## ERASING DATA WITHOUT ERASING THE PLANET

Green Erase integrates circular-economy principles into every stage of the process. By securely sanitising devices for reuse or responsible recycling, through our eWaste partner Australian eWaste Recyclers, we help organisations reduce e-waste, lower carbon impact, and meet ESG reporting requirements. Assets are inspected and thoroughly tested to determine their functional condition. Each IT asset is then graded to ensure maximum resale value. This gives

- Reduced landfill contributions
- Maximised asset recovery value
- Documented ESG reporting.

### End-to-End Secure IT Asset Disposal

### Why Green Erase

Security You Can Trust. Sustainability You Can Stand Behind.

- Zero-Risk Data Protection
- Environmental Responsibility
- Transparent Reporting
- Enterprise-Grade Expertise
